

Retail Sales & Profit Analysis: Project Summary

Prepared by: Aryan Bansal

Project: Data Analyst Project – Retail Sales & Profit Analysis

Objective

The goal of this project was to analyze a Retail Sales Dataset, perform data cleaning, extract business insights, and build an interactive dashboard. The raw dataset underwent rigorous cleaning, including standardizing missing variables and formatting date strings into measurable values. Key Performance Indicators (KPIs) and visualizations were then modeled using DAX to answer core business questions.

Key Business Insights

1. Which region generates the highest sales?

The **West** region generates the highest sales across the dataset, significantly outperforming other territories like Ontario and Prairie.

2. Which product category is the most profitable?

While Office Supplies accounts for the highest volume of transactions, **Technology** is the most profitable product category, driving the largest share of the overall bottom line.

3. Which products generate the highest revenue?

The highest revenue drivers are high-ticket items. The top three products by total sales are:

- Global Troy Executive Leather Low-Back Tilter
- Polycom ViewStation ISDN Videoconferencing Unit
- Canon PC940 Copier

4. Which customer segment contributes the most profit?

The **Corporate** customer segment contributes the most profit, outperforming the Home Office, Small Business, and Consumer segments by a wide margin.

5. What is the monthly sales trend?

Based on the order dates, overall sales experienced a continuous downward trajectory from 2009 through 2011. However, the data shows a sharp pivot and a strong rebounding sales trend heading into 2012.
